SUMMARY OF THE PROJECT

The Western Tanzania Clean Energy Project is tasked with promoting and implementing clean energy technologies, specifically fuel efficient stoves, in targeted households and institutions. The project is also tasked with documenting the processes used to pilot the studies and the evidence of savings from the use of clean energy technologies.

The project was carried out over a period of two weeks starting from November 14th to December 3rd 2014. The team consisted of Glory Tarimo, Kennedy Mremi and Adam Lutta from ARTI Energy Ltd (ARTI) in cooperation with The Jane Goodall Institute (JGI) team. The sensitization meetings were done in 12 villages. The 12 villages that were visited and where stoves distribution took place were: Kazuramimba, Kalinzi, Ilagala, Uvinza, Bitale, Mkongoro, Nyarubanda, Mkigo, Mwamila, Matyazo, Majalila and Katambike. We explained to them the multiple benefits of using clean energy technologies and their benefits to the environment. We successfully reached our target of distributing a clean cooking technology to a total of 480 households.

The reporting and documenting evidence of household and institutional stoves savings both quantity consumption and funds spent on purchasing fuel will be done after 3 months which will be arranged by the Jane Goodall Institute.

Production centres were established for the trainees on briquettes and proper use of the machines and how to keep and maintain the machines, Documenting on the efficiency of briquettes has been done by ARTI Energy by preparing a template which will be used by The trainees to fill in information about the briquettes they produce, The template will be in Swahili. (See Attached Template)

SCOPE OF THE WORK

The project contracted ARTI-TZ with objectives to:

- Increase awareness within twelve target villages Kazuramimba, Kalinzi, Ilagala, Uvinza Bitale, Mkongoro, Nyarubanda, Mkigo, Mwamila, Matyazo, Majalila and Katambike the multiple benefits of using improved cook stoves and other clean energy technologies.
- Pilot the use of improved cook stoves in institutions identified as the highest consumers of charcoal and firewood and include Tumaini Secondary School in Nsimbo District, Mpanda Girls in Mpanda District, Lugufu Girls for Uvinza District and Nyarubanda Secondary School for Kigoma District.
- Document the methodology used to identify appropriate biomass, produce briquettes and pilot the use of briquettes, as well as the final recommendations on how to scale up and reach more people.

- Increase availability and utilization of briquettes as a sustainable alternative source of household cooking fuel. Establish five production centers and distribution kiosks (Two in Kigoma, Two in Mpanda and One in Uvinza).
- Document evidence of savings that a household and institution will make by using Energy serving stoves, as well as propose a way forward to increase coverage and scale up of the technology.
- Identify groups interested in solar drying and heating technologies in Kigoma – e.g., small business owners.

INCREASE AWARENESS IN TWELVE TARGETED VILLAGES

DELIVERABLE: LIST OF VILLAGES SENSITIZED AND PARTICIPANTS NUMBER

A key component of the project was undertaking sensitisation meetings for clean technologies in Kigoma and Katavi regions. The project aimed to hold meetings in 12 villages, with each attended by 100 participants. All 12 meetings in the selected villages were held although for various reasons, the attendance was below predictions, as shown in Table 1 below. Heavy rainfall was the main challenge during the entire period of training, discouraging people from attending combined with the prevalence of farming commitments. Those participants that were sensitised on clean energy technologies will be champions of the information received to other members of their community that did not attend and extend the impact of the meetings beyond those simply in attendance on the meeting day.

Table 1: Sensitisation Meeting - Villages and Attendance

VILLAGE	PARTICIPANTS	VILLAGE	PARTICIPANTS
Bitale	56	Nyarubanda	35
Mkongoro	36	Mkigo	22
Mwamila	21	Matyazo	41
Kalinzi	27	Kazuramimba	40

Ilagala	41	Uvinza	35
Katambike	30	Majalila	38
		TOTAL	400

Prior to project implementation, a key recommendation was ensuring that all beneficiaries were educated on the technologies prior to their exposure to them. For this reason, sensitization meetings were held in all the twelve villages prior to the introduction of the clean cookstove technology. The sensitisation meetings covered:

- Introduction to cookstoves
- How to use the stoves and maintenance
- Advantages/ benefits of the stoves
- Discussion on deforestation and how the cookstoves can help reduce this.

Following question time, community members were then given an opportunity to purchase subsidised products. They were reminded again of correct use behaviours and provided with proof of purchase and warranty.

Despite lower than expected attendance, sensitisation meeting were very successful with 400 cookstoves sold directly as a result of the meeting.

Schools where the institutional stoves were installed were also given the training required for the correct use of the stoves and the maintenance needed to maximise the life and benefits of the stoves.

PILOT THE USE OF IMPROVED COOK STOVES IN INSTITUTIONS IDENTIFIED AS THE HIGHEST CONSUMERS OF CHARCOAL AND FIREWOOD

DELIVERABLE: IMPLEMENTATION PLANS FOR INTEGRATING IMPROVED TECHNOLOGIES INTO HOUSEHOLDS AND INSTITUTIONS

A total of four institutional stoves were installed in Nyarubanda Secondary School, Tumaini Secondary School, Mpanda Girls and Lugufu Girls Secondary School. These four stoves will serve up to two thousand students in total and help to reduce school fuel usage and the adverse environmental impacts of this large volume fuel use. Prior to the project, all four schools were all using traditional wood fire stoves. These stoves use traditional materials such as rocks or cement and are poorly designed, creating low efficiency and high polluting stoves. The use of these stoves for cooking for large number of students (around 500), exacerbates deforestation in the schools surrounding area and the health impacts from indoor air pollutions for those cooking.

The introduction of Envirofit’s Institutional stoves into these schools will have a significant impact on the health, environmental and financial impacts of the school’s cooking activities. The new, specially designed stoves are predicted to reduce the school fuel usage and expenditures by up to 80%. Their design along with chimney allow for a reduction in the smoke emissions in the cooking area by up to 90%, creating cleaner cooking environments.

DELIVERABLE: LIST OF COMMUNITY MEMBERS USING DOMESTIC FUEL EFFICIENT STOVES

The stoves distributed for demonstration in the 12 villages are type CH5200 that uses Charcoal and M5000 that uses Wood. A general observation is that people preferred charcoal stove than wood stove, a situation that the team did not expect. This indicates that the use of charcoal in villages may be higher than thought before.

The 480 community members who had the opportunity to purchase the domestic stoves received similarly significant benefits. The households’ stoves are specially engineered and manufactured with high-quality components to enable fuel efficiency savings of up to 60% of their daily fuel consumption and expenses, cut cooking times in half and reduce harmful smoke

and emissions by up to 80%.

All the beneficiary details were recorded indicating the number model of stove sold, serial number of the stoves, contact details, date of purchase and the physical location of the person who bought the stove, this will be used as a monitoring tool for both JGI and ARTI Energy during the evaluation period and follow up on warranty details. Each stove comes with a five years warranty for the combustion chamber.

Nr	Village	CH5200 Charcoal	M5000 Wood	Total
1	Mkigo	10	40	50
2	Nyarubanda	15	30	45
3	Kalinzi	15	20	35
4	Matyazo	15	30	45
5	Bitale	15	21	36
6	Mkongoro	15	21	36
7	Uvinza	15	26	41
8	Mwamila	15	24	39
9	Kazuramimba	15	24	39
10	Ilagala	15	20	35
11	Majalila	23	11	34
12	Katambike	22	23	45
Total		190	290	480

DOCUMENT EVIDENCE OF SAVINGS THAT A HOUSEHOLD AND INSTITUTION WILL MAKE BY USING ENERGY SERVING STOVES

DELIVERABLE: GUIDE DEVELOPED ON THE PROCESSES USED TO PILOT THESE TECHNOLOGIES, AS WELL AS FINAL RECOMMENDATIONS ON IDENTIFICATION OF APPROPRIATE CLEAN ENERGY TECHNOLOGIES AND PILOTING THEM.

JGI and ARTI Energy undertook significant planning in developing a plan for the implementation of this project. ARTI developed a guide (Annex 1) for the design and implementation of the project based on their extensive experience with clean technology projects and their design. A working plan and schedule was established based on ARTI and JGI to ensure that all activities were effectively completed with maximum impact on the beneficiaries.

DELIVERABLE: EVIDENCE OF HOUSEHOLD AND INSTITUTIONAL SAVINGS BOTH QUANTITY CONSUMPTION AND FUNDS SPENT ON PURCHASING FUEL

Reporting on the efficiency and impact of the stoves will be completed by the Jane Goodall Institute after a period of 3 months (March 2015) following distribution of the stoves. Based on ARTI Energy's experiences distributing the stoves in Tanzania and independent product testing, it is expected that household stoves will reduce household consumption and expenses by 50-60%. A recent independent performance monitoring report for ARTI's cookstoves in Tanzania found monthly household fuel expenditure savings of an average of Tsh. 45,000, although nominal savings will differ based upon previous expenditure.

Information regarding the

INCREASE AVAILABILITY AND UTILIZATION OF BRIQUETTES AS A SUSTAINABLE ALTERNATIVE SOURCE OF HOUSEHOLD COOKING FUEL

DELIVERABLE: ESTABLISH BRIQUETTE PRODUCTION CENTRE WITH MACHINE INSTALLED AND TRAINED PEOPLE FOR PRODUCTION.

Two trainings were conducted on the production of charcoal briquettes; one was in Kigoma and one in Mpanda districts. Both of these training were five day trainings covering a range of topics based around production of charcoal briquettes along with sales and marketing of the briquettes. The trainings begin by introducing the type of equipment and tools required for the productions process and proceed to train the group on how to create this equipment i.e. charring kiln. Participants are then taught how to identify the biomass that is suitable for use in the process. The trainer and participants together identified maize and rice husks along with residual charcoal powder as potential key sources of biomass in these areas. These are all good sources of fuel that can be burnt to make briquettes of high-calorific value and are available in high quantities.

The trainings served as a base for establishing five production centres in Kigoma (2), Uvinza (1) and Mpanda (2) Region. In addition to the production centres, five distribution kiosks were built in these areas to serve as sales point for the briquettes by the trained groups.

DELIVERABLE: DOCUMENT EFFICIENCY OF BRIQUETTE IN TERMS OF ENERGY AND MONEY SAVING

A briquette testing template has been prepared (Annex 2) by ARTI Energy, which will be used by the trainees to document the efficiency of the briquettes, difference between the briquettes and how much more money and energy they save compared to the normal charcoal.

DOCUMENT THE METHODOLOGY USED TO IDENTIFY APPROPRIATE BIOMASS, PRODUCE BRIQUETTES AND PILOT THE USE OF BRIQUETTES,

A simple survey conducted during implementation of this activity identified a number of biomass that can be used to make briquette in Kigoma and Katavi region. Farm remains include maize cobs, maize straws, industrial waster include palm oil nut shell, sawdust, rice husks and coffee husks.

All of these materials were tested and various mixtures also tested. The best biomass basing on the efficiency of its charcoal and availability both in Kigoma and Katavi is a mix of sawdust and rice husks. Proposed portions are half by half. With this mix briquette produced are heavy and slow burning hence cooking for longer. Other combinations like coffee husks and maize cobs are limited in quantity but also their briquette is lighter and burns faster hence cooking for relatively shorter time.

IDENTIFY GROUPS INTERESTED IN SOLAR DRYING AND HEATING TECHNOLOGIES IN KIGOMA

The team of ARTI Energy staff and JGI staff visited several business man and women to observe how much solar drying is used in Kigoma Township. In principle all households use solar for domestic drying including food staffs. In business centres also a number of solar drying activities were observed where fish and saddins drying is dependent on solar energy. Cassava groundnuts and all farm products also are locally dried in the sun. For this reason community members are not exposed to any other option but again other options like electricity are too expensive for most of the people.

The team was convinced that high tech technologies for fish and saddins drying would be very helpful for fishing communities in Kigoma. Four fish processors interviewed mentioned of other drying technologies that would help them continue with production even on wet season when normal solar energy is scarce and fish catch is high.

Another venture was a group of fruit farmers who cultivate pineapples, bananas and have mangoes. All of these fruits have high season when the cost goes so low and some fruits rot because they cannot preserve them. Fruit solar drying could be a solution to this problem.

RECOMMENDATIONS

Following the completion of the project several recommendations can be made to increase the reach of the project, improve effectiveness and efficiency in reaching project objectives.

- Support Permanent Cookstove Distributor Presence

In order, to promote the long-term impact of the sensitisation meetings and the introduction of cookstoves into communities, future projects should provide support for establishing cookstove distributors who are able to supply cookstoves to villages. Providing start-up capital for these enterprises would allow the cookstoves to be disseminated sustainably during and following the project completion with sensitisation meetings also able to serve as a means of building community awareness of the availability of the stoves in their district.

- Improve Planning for Sensitisation Meetings

In order to maximise attendance and participation in the sensitisation meetings, they should be scheduled outside of rainy season and/or in indoor areas.

- Expand the Reach of Institutional Stove Support

The impact of the use of institutional stoves is significant and can certainly be scaled up to reach a huge number of schools. The key barrier for the adoption of the stoves in schools is the lack of up-front capital required to purchase the stoves outright. In order to combat this, setting up a credit facility to help schools fund the stoves across a period of time, correlating with the realisation of fuel savings would increase the accessibility of the stoves to the wide audience with already installed stoves serving as important demonstration stoves in these areas.

The stoves, which were installed through the project, are not able to completely service the required cooking capacity at the schools. These schools should be provided access to purchase or be provided more stoves to meet their required cooking capacity and become completely clean cooking schools.

- Further Support, Trainings for Charcoal Briquettes

Following the successful piloting of charcoal briquettes production and distribution in these sites further support can be provided to scale up these efforts in order to meet demand.

Expanding these activities, through more training, bigger or more equipment will increase the supply of sustainable and affordable fuel for local villagers to access.

CONCLUSIONS

The 'Western Tanzania Clean Energy Project' served as a exciting pilot project for introducing clean energy solutions to rural and semi-urban communities and institutions. It will provide important validation of charcoal briquette and improved cookstove technologies as viable and relevant technology solutions to the environmental and economic problems caused by wood based fuel usage.

Annex 1

Guide for Implementation of Clean Energy Technology Projects

1. Identify the Key Energy Related Problems that Need to Be Addressed in the Community

- Gather information about the target group i.e. household size, fuels used, energy use habits.
- Use local knowledge or research to identify the key energy related problems affecting households, institutions, businesses and the community.
- For example, widespread deforestation caused by the high use of charcoal and firewood has a severe impact on the environment, which may be, is critical to a community's economy.

2. Investigate and Select Available Technologies that To Mitigate the Problems

After establishing the relevant problems and their sources, work should be done to identify viable mitigating technologies or programs that could be implemented in the affected areas. The criteria for the selection for technologies or programs should consider:

- Impact – Will the technology have the substantial positive impact desired on the problem? What are the possible negative impacts of the technology on the user(s)?
- Affordability – Will the technology provide an accessible solution for the target groups? Are their on-going costs that will be incurred by the user(s) following the projects completion?
- Availability – Is the technology available in the local market? Are spare parts, equipment and required services available for the effective use of the technology?
- Relevance – Is the technology relevant to the user(s) and their context? Does the technology require a significant behavioural change?
- Sustainability – What is the expected usage life of the technology? What will be the situation at the end of the life of the technology e.g. progression to other technology.

3. Develop Plan and Implement the Project and Technology

Once the desired technology has been selected, a plan for the procurement and implementation of the technology must be developed. It should include:

- Objectives – Who is the target group? What is the target number of beneficiaries?
- Timeline – Develop a schedule and plan for the activities required to implement the project
- Procurement Process – Are there multiple companies offering the same technology? If yes, what are the differences in the services and pricing offered? Which company chosen and what quantities are required?
- Payment Terms and Delivery - How the company be paid – pre or post delivery, instalments? How will the goods reach the project site?
- Implementation – How will the technology be implemented? Will it be provided free of charge or paid for by target group? Is end user training or community education required to maximise the effectiveness of the project?

4. Monitor Project Progress

Develop Monitoring and Evaluation methods that help to measure and understand the impact of the project. This process will also help to identify the strengths and weaknesses in the project's implementation that can be adjusted as required to maximise project effectiveness. These findings can also be used to assist in the implementation of future projects.

CURRENT FUEL USAGE AT HOME

1. What fuel do you use at home? (Charcoal, Kerosene, Firewood, LPG etc.)

2. Who cooks at home? You or someone else?

3. How often do you cook per day?

4. How much time do you spend cooking/day?

5. How long does it take to make 2 liters of tea or to cook rice in a 5 liter sauce pan?

(find a type of food for a fixed quantity that you can ask for every household)

6. How much fuel do you use each day? (*Quantity in grams*)

7. How much do you spend on fuel each day? (*TSH*)

CHARCOAL BRIQUETTE USAGE AT HOME

8. How did you hear about charcoal briquettes?

9. Were you given briquette as sample or did you buy briquettes or both?

10. When using briquettes, how much time do you spend cooking/day?

11. When using briquettes, how much briquettes do you use per day? (*Quantity*)

12. In terms of quantity, do you feel you use the *same amount, more* or *less* charcoal briquettes than when you use wood charcoal?

With the information collected in sections 1 and 2, fill the following table and make the calculations.

Type of information	Calculation template	Calculations
A. Quantity of wood charcaol used per day (ideally in KG)	A	
B. Price of wood charcoal (ideally in tsh/kg)	B	
C. Daily spending for wood charcoal (tsh)	$C = A * B$	
D. How long does it take to boil 2 liters of water with wood charcoal (refer to question e) in section 1-) (Min)	D	
E. Quantity of charcoal briquettes used per day (ideally in KG)	E	
F. Price of charcoal briquettes (ideally in Tsh/kg)	F	
G. Daily spending for charcoal briquettes (tsh)	$G = E * F$	
H. How long does it take to boil 2 liters of water with wood charcoal (refer to question d) in section 2-) (Min)	H	
I. DAILY SAVINGS/LOSSES IN TERMS OF QUANTITY (KG)	$I = A - E$	
J. DAILY FINANCIAL SAVINGS/LOSSES(TSH)	$J = C - G$	
K. DAILY TIME SAVINGS/LOSSES (MIN)	$K = D - H$
