ABGC Thematic Workshop
ICT in Conservation
Examples in Agriculture

Jill S. Shemin,
Associate ICT Advisor
AFR/SD/EGEA
#1: Caveats and Introduction

- Much experimentation, few big successes.
  - Few today sustainable, scalable
- Danger of “development legends”, award winners.
- Consider your full ICT Toolbox.
- ICT for extension – and beyond.

The 2-Pronged AG Extension Problem

Too few farmers have access to the extension services they need.
Extension workers cannot easily tap all the information available to help farmers.
Why ICT for USAID in Sub-Saharan Africa work?

• ICT offers a set of powerful tools to enhance the impact of USAID’s development programs and the achievement of USAID’s strategic goals.
• Why is ICT important for economic growth both in agriculture and non-agriculture sectors
• How can it help enhance development activities related to the environment as well as economic growth.
• Key challenges, opportunities and constraints related to ICT in sub-Saharan Africa,

ICT is a tool, a means to an end. NOT a silver bullet, NOT a panacea.

Still comes down to Processes and People
Key Points

What we need for good AG development:

1. Affordable Access to Telecom Services
   - Access improving but access for the rural poor still lags
   - A few key ways to tackle this

2. ICT Applications to Increase Impact
   - Lots of projects use ICT but far too few with apps that are sustainable, scalable.
   - Why we care: key problems ICT can help solve.
   - A few examples.

3. What Works – and What Doesn’t
   - Up-front business plans: some possible revenue sources

4. Where to Get Help
Key Points

What we need for good AG development:

1. Affordable Access to Telecom Services
   - Access improving but still the rural poor still lagging
   - A few key ways to tackle this

2. ICT-enabled applications to increase impact
   - Why we care: key problems ICT can help solve.
   - Lots of projects use ICT but far too few apps are sustainable, scalable.
   - An example or two.

3. What Works – and What Doesn’t
   - Up-front business plans: some possible revenue sources

4. Where to Get Help
Key Points

What we need re: ICT for good AG development:

1. Affordable Access to Telecom Services
   - Access improving but still the rural poor still lagging
   - A few key ways to tackle this

2. ICT Applications to Increase Impact
   - Lots of projects use ICT but far too few with apps that are sustainable, scalable.
   - Why we care: key problems ICT can help solve.
   - A few examples.

   - Among other tips: up-front business plans:
     some possible revenue sources

4. Where to Get Help
Challenges in Extension ICT May Help Meet

Too few farmers have access to the extension services they need.

And they can forget key learning – so reminders can help.

Extension messages can be tailored by crop and timed in crop cycle.

Extension workers cannot easily tap (know) all the information available to help farmers.

Extension workers may not know what farmers want to learn or don’t understand.

Fast feedback loop from farmer offered by mobile networks is unprecedented – “voice of the farmer”
Opportunities to Leverage to Increase Use of ICT

Opportunities related to AG development, and econ growth

• Almost all agriculture development projects include some farm extension services.
• Some governments are modernizing extension services.
• Scalable platforms for transactions and building economic relationships; Platforms more accessible then seen in past
• Large buyers, processors know value of extension services and are using ICT themselves. (*Your examples please!*)

Opportunities related to ICT

Access to mobile networks *especially* is expanding dramatically in developing countries –*and the poor use mobiles.*

Mobile networks now handle voice and data applications.

MNOs are competing hard for market share, to reduce churn and some are turning to mobile AG services to increase appeal.

Data driven decision-making becoming more and more a requirement
Few examples from the field

1. MTZL [Zoona], Zambia. www.zoona.ca.za
   - Agent payments, supplier payments, Vouchers/Subsidy payments, Agent network

2. mFarm, Kenya
   - Provide market information, link buys and farmers, current agritrends. Service via SMS, can peruse by crop category

3. mFarms, Ghana
   - Farmer/outgrower management, extension worker mgmt, GPS back-end, manage and send custom messages to workforce

4. Grameen Foundation CKW, Uganda
   - CKW facilitates a human network of village intermediaries with smartphones +custom apps to provide 'last mile' farmers with relevant, timely ag information to gain livelihood improvement. Ag content is housed on a back-end, everything is GPS tagged. CKWs also do mobile Data collection which is part of sustainability model.
MNO’s keen to make $$, reduce churn with mAgri

Two USAID cooperative agreements focused on scaling

- **mFarmer Initiative**
  - GDA with Gates Foundation; GSMA implementer
  - mExtension services
  - 3 MNO’s in Africa: Tigo, Airtel, Orange
  - 1.5M small, poor farmers

- **Connected Farmer Alliance**
  - GDA with Vodafone ($8M): USAID ($5M); TNS implementer
  - mFinancial Services, Supply chain apps
  - 500k small, poor farmers (TZ, Kenya, Moz)

Upcoming: ICT Innovation Challenge
{part of New Alliance for Food Security}
Tips on Increasing Success

**What Works:**

- “Gandhian innovation\(^1\): frugal, sustainable, hence scalable.
- Design for scale – target top priority functionality – not “need”
- Adapt existing software platforms
- Use lead farmers, peers.
- Confirm content with experts.
- Use feedback loop: *regularly, seriously*
- Ask and answer: *is this cost effective? (is it “good enough” approach)*
- *Public-private partnerships!*
- *Allow for experimentation, failure*

---

**What Doesn’t:**

- We need “success stories”!
- Let’s just do a few pilots…
- *Assume that* ICT tool is helping *and* is most cost effective approach
- Build it yourself in-house
- The lure of “cool” devices…

---

So to close: Relevant to today

- Disseminating information, Scalable extension of content
- Building content platforms; Bridging Research–Extension divide
- Monitoring and Operations – also facilitating M&E but encouraging the mental change to see value of using day-day visualization of projects and business opps
- Transactions and Strengthening value chains; Building markets; Financial services

Feedback loops

Improving timelines + Visibility

Challenges:
- New systems – when no existing infrastructure!
- Uptake - Trust
- Quality
Where to Get Help

USAID/WDC: EGAT ICT Team, AFR Bureau (AFR/SD/EGEA)

mFarmer: GDA with Gates/GSMA to scale mobile extension services

<table>
<thead>
<tr>
<th>Why?</th>
<th>ICT Applications and Tools</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Help large buyers/processors manage their relationships</strong>&lt;br&gt;with 1000s of smallholder farmers better – for gain of buyers + producers</td>
<td>App with backend database that helps buyers determine expected yield; learn where best production + most productive farmers&lt;br&gt;• detailed producer profiles;&lt;br&gt;• track inputs distributed; measure against production&lt;br&gt;• Push, pull SMS helping buyers reward best producer&lt;br&gt;• GPS mapping + visual Dashboard from database</td>
</tr>
<tr>
<td><strong>Decrease sideselling</strong>&lt;br&gt;<strong>Monitor supply chain and expected yields</strong>&lt;br&gt;<strong>Improve quality of production</strong>&lt;br&gt;<strong>Coordinate/streamline aggregation, buying</strong></td>
<td></td>
</tr>
<tr>
<td><strong>Improve functioning of ag markets</strong>&lt;br&gt;Overtime, build price convergence and level of confidence</td>
<td>Market Price Info Systems (MIS) available by a widely accessible system (or collection of systems that augment each other.)</td>
</tr>
<tr>
<td><strong>Improve integration of value chain</strong>&lt;br&gt;• Empower farmers’ decision making power - i.e., Farming as a Bus thinking; bargaining power&lt;br&gt;• Empower traders - as providing a service for a fee, not short-changing blind farmers.</td>
<td>Market Price Info Systems (MIS) available by a widely accessible system (or collection of systems that augment each other.)&lt;br&gt;Decision making tools comparing prices at various markets and estimated cost of transport for farmer’s produce.</td>
</tr>
<tr>
<td><strong>Increase saving, provides path to other financial products,</strong> including insurance; get funds faster from relatives at key times when needed, reduce borrowing;</td>
<td>Mobile Money, m-Banking, more m-financial services</td>
</tr>
<tr>
<td><strong>Help small producers afford best inputs and receive at right time.</strong> Help input providers know demand and aggregate delivery. Help input supplier assess potential rural market better and invest in extending distribution.</td>
<td>Aggregate demand. e-vouchers/M-Vouchers to offer up-front discounts on inputs at end of season and delivered at beginning of next season.&lt;br&gt;Feedback system that is automatic -- see purchases of products; over time use to inform business and target products</td>
</tr>
<tr>
<td><strong>In a scalable way teach more farmers good farming practices to boost productivity</strong>&lt;br&gt;(complementing proven methods that are more intensive and less scalable – face-to-face, posters, demo plots)</td>
<td>-Low-cost videos in local languages shared by many&lt;br&gt;-Recorded/replayable audio programs&lt;br&gt;-Call Center&lt;br&gt;-Interactive radio programming, i.e., can be combined with SMS service</td>
</tr>
<tr>
<td><strong>Increase adoption of good farming practices to boost productivity</strong> and Convincing farmers to actually <em>change</em> practices and benefits they will see&lt;br&gt;• Reinforce messages from other means; Increase uptake + adoption</td>
<td>-Mobile messaging (inbound, outbound): reminders, alerts (SMS; voice messaging)&lt;br&gt;-Melodoramas on IVR (e.g., Freedom Fone)&lt;br&gt;-Call Center&lt;br&gt;-Compelling radio programs – with “Voice of the Farmer” via cell phones, more</td>
</tr>
<tr>
<td><strong>Clearer picture of farmer agricultural behavior</strong> with a feedback loop to/from farmers&lt;br&gt;• Use of/implementation of information and tools&lt;br&gt;• Enable feedback loop that operates in a timely manner</td>
<td>-Databases and system that accrue data automatically from usage.&lt;br&gt;• i.e., farmers accessing information - what information and where they are given their profile or an original survey&lt;br&gt;• analytics on most frequently searched content&lt;br&gt;-Low-cost mobile surveys&lt;br&gt;-Ease of ICT tools for more frequent, deployment and clearer picture</td>
</tr>
</tbody>
</table>
1. Zona, Zambia

Supplier payments: Payments out

A Zona account is set up for a company. When a lump sum amount is deposited into the account, can make payments equal to this amount (less any fees).

3 things happen to initial payments
As soon as the payroll is authorized, Zona automatically processes payments into corresponding bank accounts.
2. mFarm, Kenya   http://mfarm.co.ke/

“an integrated and customizable ICT platform designed to help ag value chain stakeholders communicate with each other efficiently, establish and maintain business relationships and manage the flow of goods and services among them.”

Uses a database structured to hold complete profiles, including:

- mobile applications (java and android and web applications).
- production and purchase planning; verification of adherence to production techniques and schedules;
- broadcasting alerts and extension messages through SMS and IVR services;
- estimation of production cost.

Requires quality GIS databases of actors/stakeholders.

Community Knowledge Worker, Uganda

CKW uses mobile phone applications and human networks GF has created to provide poor ‘last mile’ farmers with relevant, timely agricultural information. Focus is on reaching the ‘last mile’ at scale, a sustainable model delivering services to the poorest.

• Information helps farmers improve their lives and livelihoods by increasing their productivity and income. Gives CKWs a ‘business in a box’ which include phone charging solution
• Sustainable model includes offering CKW data collection services to any data collection request in CKW areas. CKWs are paid as enumerators
• Has also developed field force management tool and custom Dashboard that is intended to support CKW network
Community Knowledge Worker, Data Collection
